# A S S I G N M E N T (Frontend Engineer)

OBJECTIVE

Create a comments section using React.js/React-native. Please refer the design shown below

IMPORTANT POINTS

1. Validate if name and comment text is entered while adding a comment or a reply
2. Each comment or reply should be saved with current date and time.
3. The comments and replies should be sortable date and time as shown in the design.
4. When a user clicks on edit he should be able to only edit the comment text and should not be allowed to edit the name.
5. Place the delete button on the border of the comment or reply as shown in the design.
6. Persist the data in using one of the webstorage so that on refresh of the page data is not lost.
7. Make sure to test the application properly before submission
8. Try using State management tools like Redux.Js / Zustand
9. Share APP build or live application along with github repo.
